- **Multimedia presentations by noted speakers**
- **Information stations**
- **Pollinator-friendly plants available**
- **Kids activities**

POLLINATORS ARE ESSENTIAL TO LIFE, YET THEY ARE IN DECLINE!

At least 80 percent of the world's crop plant species require pollination and one out of every three bites of food comes through the work of animal pollinators: birds, bees, butterflies, and also bats, beetles and even mosquitoes. Their decline poses a significant threat to biodiversity, to global food webs, and to human health.

Attend *Pollination Celebrations* to learn how you can be a partner in pollination.
